Hi Mr. Doe,

This is Weekly Report #1:

Today, I had my first session with Jane. Overall, it was a productive time, and I was able to learn more about Jane and her mathematical abilities.

We started by talking about what to expect from the class, and we started out by reviewing percent change briefly, talking about its real-world significance. After that, we went on to go through the list of different pre-algebra topics. After this quick survey of pre-algebra, we decided to get started with the content we aim to cover in our time together. We started by doing chapter 10 of the textbook, going through what polynomials are, how to manipulate them, and use their properties to simplify them. Jane did pretty well with understanding this but seemed to lose focus pretty quickly. As a result, I have implemented short breaks every 20 minutes so that both of us can stretch and relax before getting back into tutoring. Out of the 14 examples we did in class, Jane only got 3 wrong, which is great! Her mistakes were because she did not understand the idea that, for example $(3^2)^3 = 3^6$, and thought it was 3^5 .

In addition, here is my current plan for the next few weeks:
(nothing final, just my current approach)

7/13: finish up chapter 10 + review chapters 1-3

7/17: start chapter 11 + review chapters 4-5

7/20: continue with chapter 11 + review chapter 6

7/24: finish chapter 11 + review chapter 7

7/27: review chapters 8-11

Let me know your thoughts on this, it is a mix of pre-algebra review, covering topics in algebra, and working on tough problems to really test her understanding. I will also be sharing strategies and tricks that can allow her to do this. Please let me know if you have any questions or concerns about our tutoring, and I look forward to meeting with Jane next week!

Thanks,

Neil
